Save Money by Servicing Your TPMS Sensors

§ Legislated Since **2014**

What are the benefits of servicing TPMS sensors?

Servicing extends the life of the sensor and avoids the unnecessary costs associated with replacement. This maintains the functionality of the sensor, which ultimately:

- Saves money by increasing fuel economy
- Improves vehicle performance, road handling and safety
- Reduces premature tyre wear
- Reduces the car's CO₂ emissions

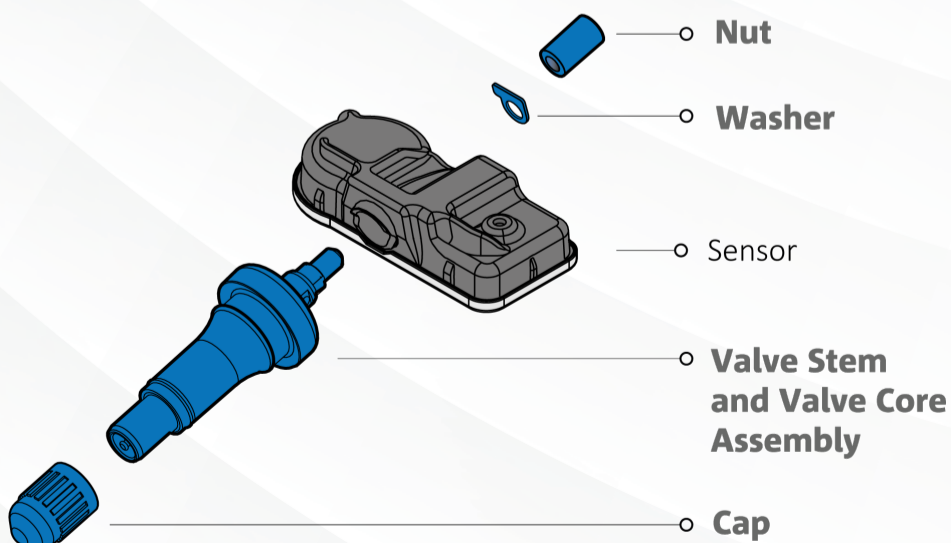

When do sensors require servicing?

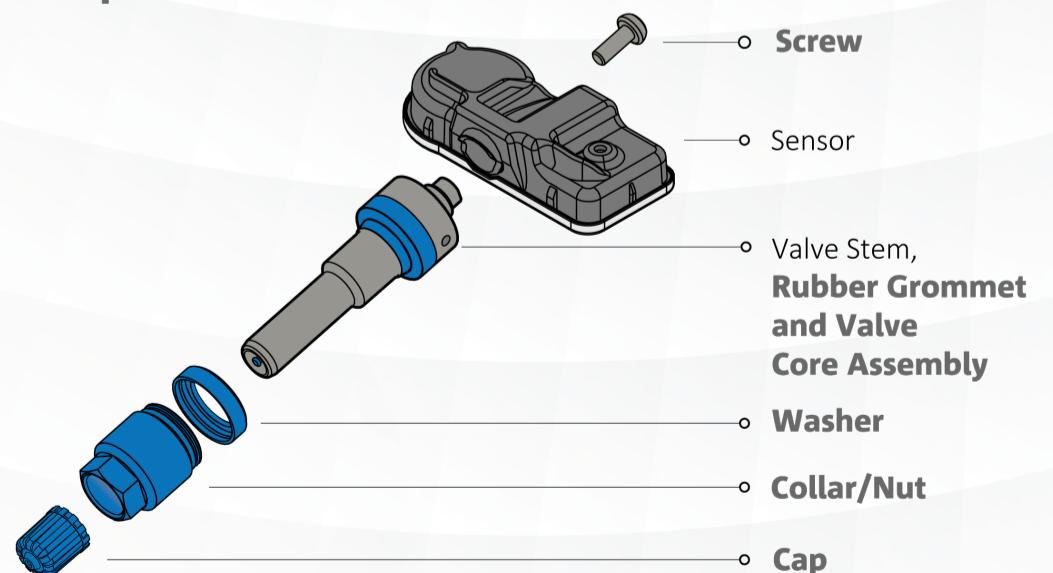

Manufacturers recommend servicing TPMS sensors every time the tyre bead is broken, e.g. whenever a tyre is repaired or replaced, in order for them to last their full lifetime of approximately 7 years.

Which parts of the sensor require replacement when servicing?

Snap-In

Clamp-In

Components that require replacement when servicing sensors are highlighted above in blue.

Ask your garage technician about servicing your TPMS sensors to see how you can benefit today!
